thesis.

A second look at your investments

Personal investment research, goal planning and portfolio review

Shivam Gupta · October 2026

thesis-investing.web.app

An investing decision outlives the first stock tip

01	**The goal**	A home deposit in two years has different needs from a long-term investment.
02	**The evidence**	Prices, filings and headlines arrive separately, often with different dates.
03	**The follow-through**	The original investment case needs another look when the facts change.

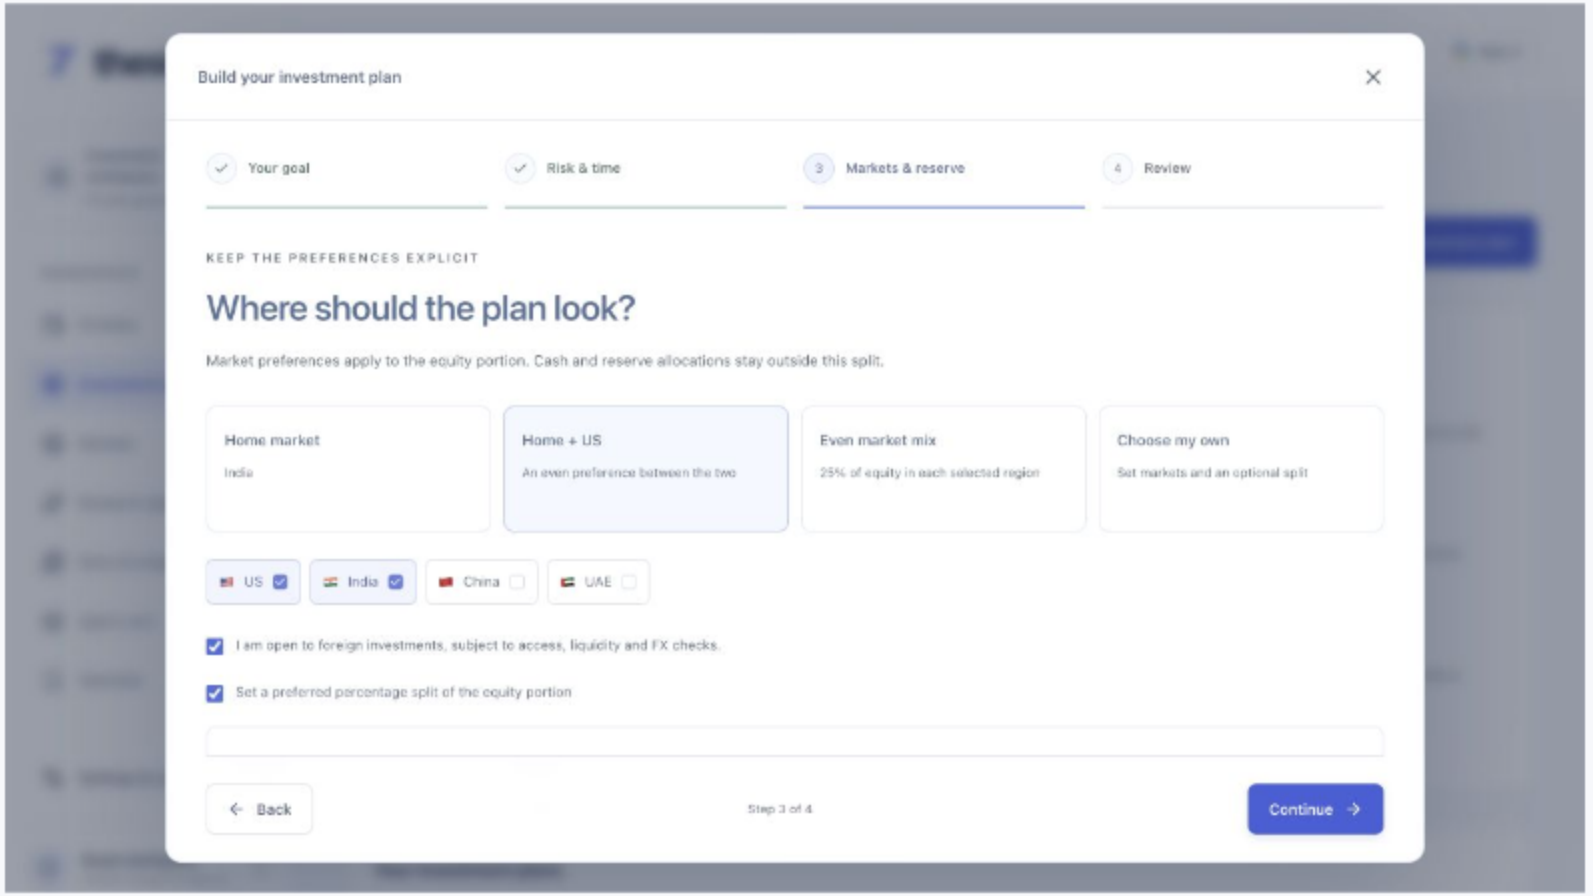

Built for my own investing research and ongoing portfolio review.

The plan starts with a few simple choices

$10,000

A home in two years
Investing from India
India and US access

20% volatility comfort
10% loss tolerance
A firm deadline

Illustrative inputs entered in the hosted application.

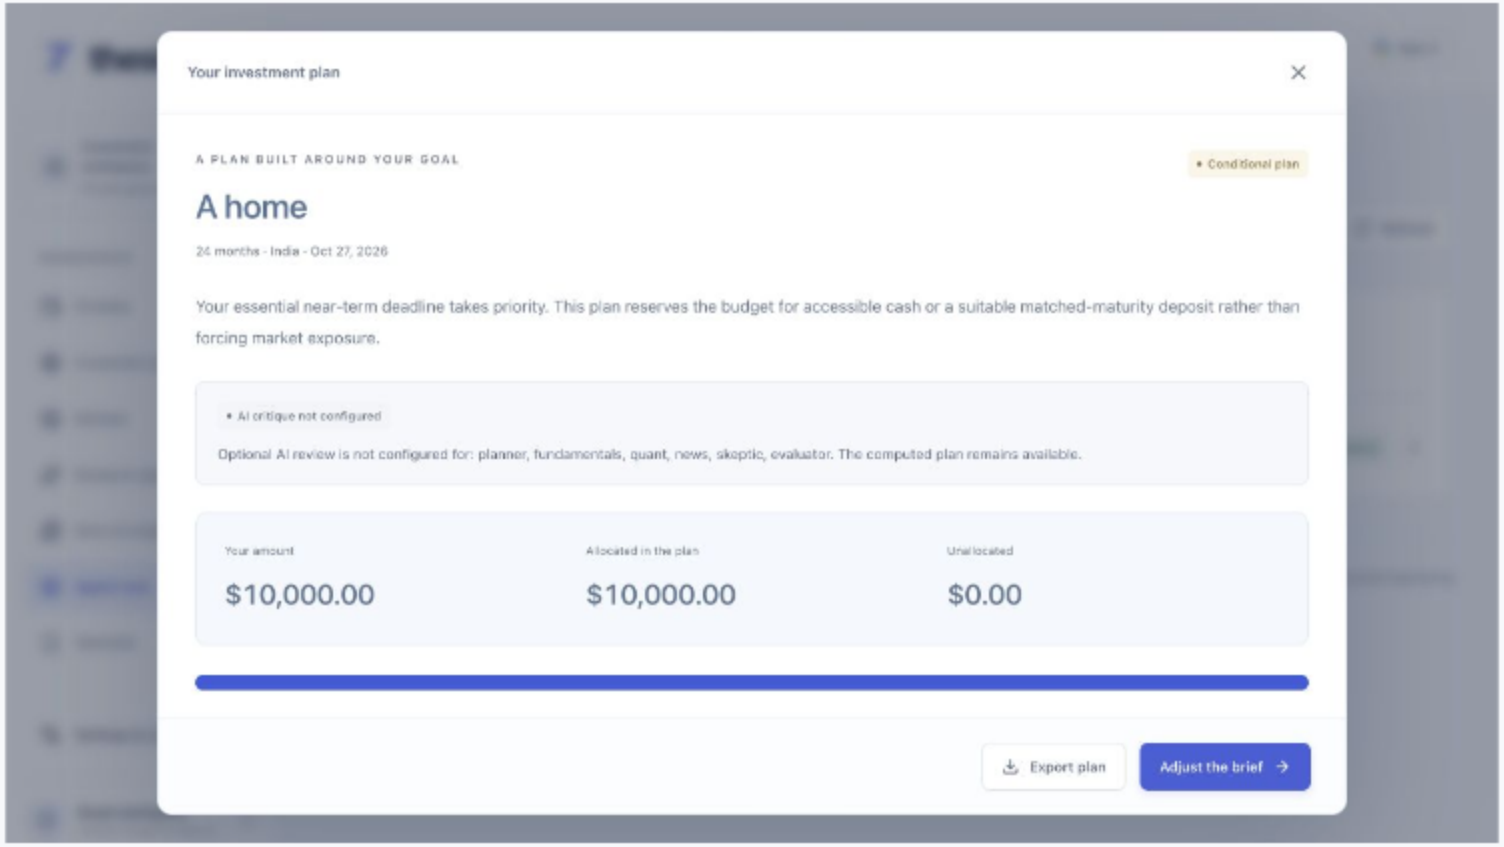

A firm deadline can make the answer cash first

$10,000 budget

100% reserved

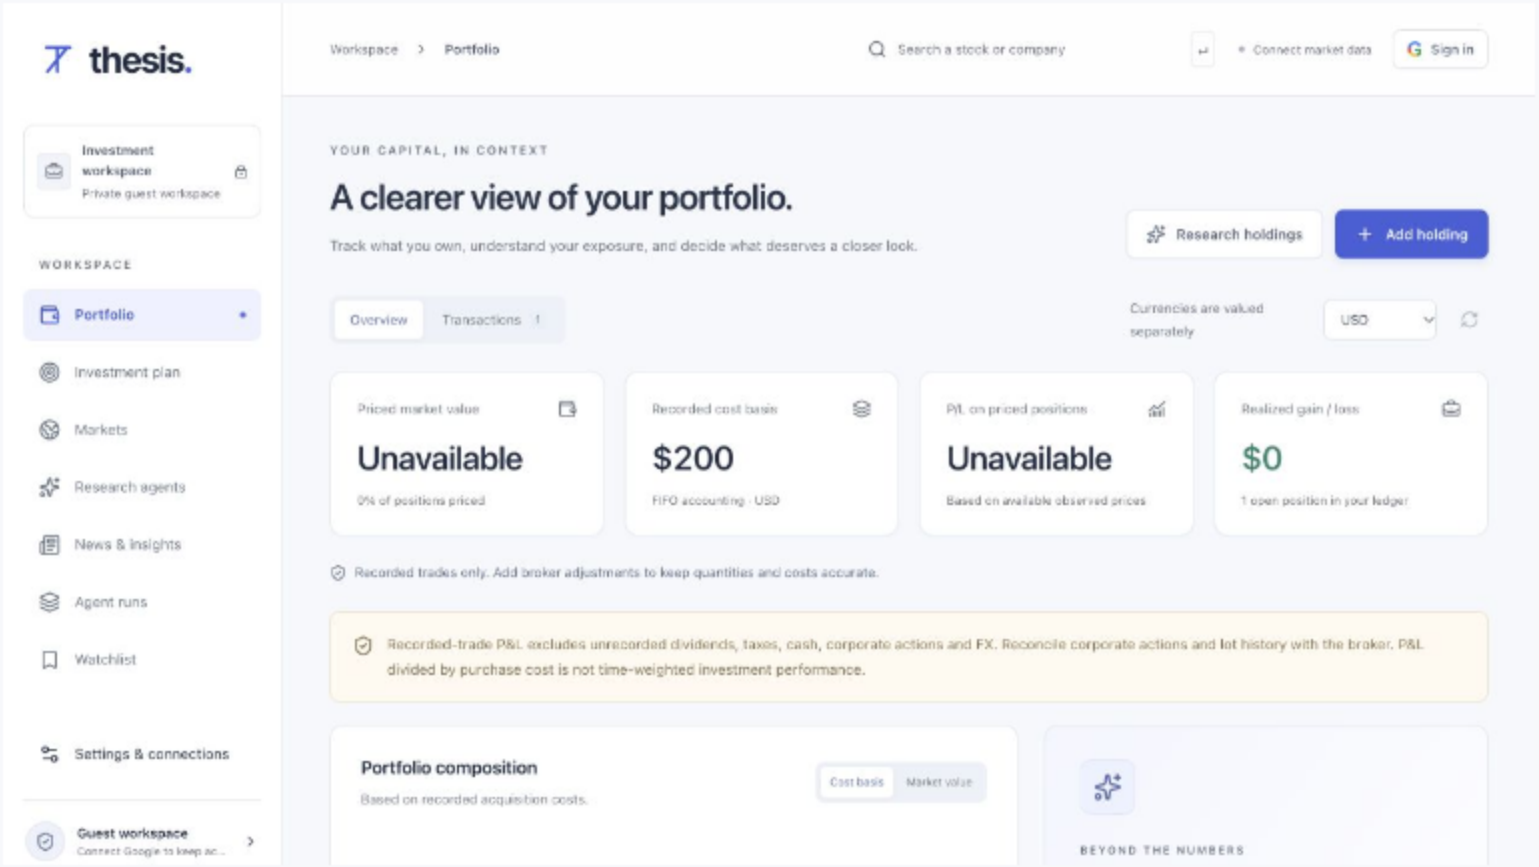

Accessible cash or a suitable matched-maturity deposit.

No bank, rate or future return is assumed.
Product, currency and liquidity checks remain necessary.

Actual conditional result for the illustrative two-year home goal.

The portfolio keeps inputs and observations visible

Illustrative manual input

2 AAPL shares
$100 entered per share
$200 recorded cost basis

The live valuation stays unavailable until an entitled quote source supplies it.

An attributed TradingView chart provides a separate market view.

Source review combines a model, code and memory

Historical memory adds context. Current source checks still run again.

Every required component has a working responsibility

Zetaris	Owner-scoped financial observations	Actual SQL readback with matching payload hash
Nightshift	Primary model gateway for source review	Concrete model and usage receipts in each report
NVIDIA Nemotron Mini	One source-risk countercheck	Bounded output with binding code validation
Meterless H-MEM	Recall prior review decisions	Historical context remains separate from sources

React and TypeScript UI. Firebase Auth and Hosting. Firestore, Cloud Run and Cloud Tasks.

The next step is attention between reviews

Working today

Goal-based conditional plans
Manual portfolio accounting
Attributed market charts
Source audits and saved review history

Next for personal use

Scheduled filing and news checks
Alerts when the original case changes
Broader entitled market coverage
User feedback on plan explanations
